1. Field of the Invention The invention generally relates to the construction of the cathode ray display screen and the method for making the same. 2. Description of the Prior Art The cathode ray tube commonly known as the "picture tube" is comprised of an evacuated envelope having an electron gun disposed at the end thereof with an internal conductive coating on the inner surface of the envelope. The electron gun projects an electron beam which impinges upon the internal coating on the inner surface of the envelope. The portion of the conductive coating which is energized by the electron beam emits light. One type of "picture tube" requires an external conductive coating on the inner surface of the envelope. The external coating is typically comprised of a highly insulative material, such as aluminum, to avoid a shorting problem which arises when the conductive coating on the inner surface of the envelope is energized. However, the structure of this type of "picture tube" causes an edge glow. Therefore, an internal coating is placed on the inner surface of the envelope to eliminate the edge glow problem. The internal coating is typically comprised of a phosphor material. In this type of "picture tube" an electron beam is produced by a cathode ray electron gun and directed toward a target of the phosphor material. The phosphor material is comprised of a binder material and a fluorescent material such as a phosphor material deposited in the binder material. The electron beam causes the binder material in the phosphor to become fluorescent. The light produced is in proportion to the intensity of the beam. The internal coating has a glass bulb portion which is fused to the internal surface of the glass envelope. The fused glass bulb portion can be mounted within the envelope in a variety of ways. For example, a glass bulb can be attached in the envelope with an internal coating on the inner surface thereof. In another method, the frit material is applied to the inner surface of the envelope and a glass bulb is mounted therein using a solder glass sealing material. The internal coating material can be applied to the surface of the bulb after it is inserted in the envelope, but it is generally applied to the inside surface of the bulb before it is inserted. The internal coating is typically fired after the bulb is inserted in the tube. The internal coating is used to insulate the bulb so that the electron beam can be directed to the bulb to produce the desired light output. Frit is generally applied to the internal surface of the glass bulb before it is inserted

1. Field of the Invention The present invention relates generally to the field of elevators. More specifically, the present invention relates to a method and apparatus for reducing the number of elevator buttons that a passenger must press when checking in to an elevator. 2. Discussion of the Related Art In today's high rise buildings, elevators are provided for the convenience of the occupants. For example, each of the occupants of a high rise building can take an elevator to a desired floor from the lobby of the building and, if desired, the occupants can share a ride to another floor. Many elevators include a number of buttons for the passenger to press to indicate that he wishes to board the elevator for the desired floor. As can be appreciated, there are a number of different floors that a high rise building might have. The amount of buttons is a function of the number of floors. For example, a building with twenty floors would typically have twenty buttons for passengers to press to indicate which floor they desire to visit. As can be appreciated, the number of buttons in the elevator control panel can be confusing to the passengers. The buttons for each floor can be distributed throughout the elevator control panel so that the passengers have to press all of the buttons before the elevator will be in operation. This can be a time consuming and confusing procedure for the passengers. To make the passenger task easier, some elevators are provided with electronic guides in the form of touch screens. The passenger presses the desired button, and the touch screen will then display the name of the floor for the passenger to visit.Music A Big Fat Message About Health, Fat, and Fitness Fat is not the enemy, but a message that is a bit too bold, and a bit too different to convey to those who have bought into the obesity epidemic narrative. Advertisement Wednesday, August 15, 2013 12:00AM By Natalia Loulis THE PARTY FOR Real Fat people is going to be held at Heaven, a bar and restaurant just across the street from Vail, in the village of Dillon. This event is not like a party for the "Real Slim Shady" gang. "Real Fat" people are happy, with good food, and the event itself was created by a third-party host, to bring people together from all walks of life who are losing weight, dieting, or changing their lifestyle to live better. This concept of "Fat-Proof" was developed in

System Requirements:

Minimum: OS: Windows 10 (64 bit) Windows 10 (64 bit) Processor: Intel Core i5-7200U (2.5 GHz) or better Intel Core i5-7200U (2.5 GHz) or better RAM: 6 GB RAM 6 GB RAM Graphics: Intel HD Graphics 630 or better Intel HD Graphics 630 or better DirectX: Version 11 Version 11 Storage: 12 GB available space Recommended: Windows 10 (64 bit
